

Harish Mistry

TRW Team Leader

I initially joined Nylacast in September 2001 working in the Automotive Division. I was employed as a Machine Operator within the finishing department. After my induction program I embarked on learning about the machines & the processes within the sector and I gained substantial knowledge of all the machines within this key area. After gaining the operating knowledge of the machines I was then taught how to set the machines. This was very intense and was relatively new concepts to me but it was a fantastic learning opportunity for me. I was also shown how to trouble shoot problems and correct any faults that were on the machines.

After this I was promoted promoted to Team Leader within the Finishing Room. During my time within the finishing room I developed a very good team of operators around me who I nurtured and made into a very flexible & loyal team. During 2007 I was promoted to the Shift Team Leader in one of our Automotive Production Plants, which has given me even more responsibility.

I have grown with Nylacast over the past 8 years and they have certainly supported my development. I have also made some very good friends & colleagues on my way. I see myself working for Nylacast for years to come and hopefully continue to develop and grow with them.

Incorporating: Nylacast UK  Nylacast SA  Nylacast LLC USA
